CLAIMS

What is claimed is:

- An isolated, homogeneous population of mesenchymal stem cells which can differentiate into cells of more than one connective tissue type, wherein said mesenchymal stem cells are obtained from bone.
- 2. The mesenchymal stem cells of **Claim 1**, wherein said mesenchymal stem cells are obtained from human trabecular bone.
 - 3. The mesenchymal stem cells of **Claim 1**, wherein said mesenchymal stem cells are obtained from human iliac crest.
 - 4. The mesenchymal stem cells of **Claim 1**, wherein one of said connective tissue types is selected from the group consisting of bone, cartilage, adipose, tendon, ligament, and dermis.
 - 5. The mesenchymal stem cells of **Claim 1**, wherein said mesenchymal stem cells are transiently or stably genetically engineered to express one or more gene products.
 - 6. The mesenchymal stem cells of **Claim 5**, wherein said one or more gene products are members of the transforming growth factor-β superfamily.
 - 7. A therapeutic composition comprising the mesenchymal stem cells of **Claim 1** and a pharmaceutically acceptable carrier, wherein said mesenchymal stem cells are present in an amount effective to produce connective tissue cells.
 - 8. The therapeutic composition of **Claim 7**, wherein said connective tissue is selected from the group consisting of bone, cartilage, adipose, tendon, ligament, and dermis.

9. The therapeutic composition of **Claim 7**, wherein said mesenchymal stem cells are transiently or stably genetically engineered to express one or more gene products.
